

I claim:

1. A curved display shelf, comprising:

a) an arcuate sidewall having an upper edge, said  
5 sidewall having at least one groove from which to hang  
merchandise;

b) a top panel secured to said upper edge; and

c) at least one hook operatively secured to said  
slatwall member for hanging to a display wall.

10 2. A curved display shelf as in claim 1, wherein said  
sidewall is a slatwall member.

3. A curved display shelf as in claim 1, wherein said  
slatwall member is bent to a semi-circular shape.

4. A curved display shelf as in claim 1, wherein said  
15 slatwall member has a plurality of horizontally parallel  
grooves.

5. A curved display shelf as in claim 4, wherein said  
grooves are T-shaped in cross-section.

6. A curved display shelf as in claim 1, wherein:

20 a) said upper edge has a recess; and

b) said panel has a peripheral edge disposed in said  
recess.

7. A curved display shelf as in claim 1, wherein said  
upper edge extends above a top surface of said top panel.

25 8. A curved display shelf as in claim 1, wherein slatwall  
member is a single piece made of extruded plastic.

9. A curved display shelf as in claim 1, wherein said at least one hook is configured to be hung from a slatwall.

10. A curved display shelf as in claim 1, wherein said at least one hook is attached to said top panel.

5 11. A curved display shelf as in claim 1, and further comprising a member secured along a back edge said top panel.

12. A method for making a curved display shelf, comprising:

- a) providing a slatwall member made of plastic  
10 material;
- b) providing a form;
- c) heating the slatwall member until pliable;
- d) bending and holding the slatwall member against the form until the slatwall member cools down such that the slatwall  
15 member retains the shape of the form; and
- e) securing a top shelf to the bent slatwall member.

13. A method as in claim 12, wherein the slatwall member is heated to about 320°F for about 3-10 minutes.

14. A method as in claim 12, wherein the slatwall member  
20 is bent to a semi-circular arc of 180°.
